PROFESSIONAL SUMMARY

Full Stack & Generative AI Developer with 3+ years of experience building and scaling web applications end to end using Java, Python, Spring Boot, Microservices, React.js, and Node.js on AWS. Cut API response times by 30% and reduced manual operations workload by 40% through automation. Hands-on with LLM ecosystems (OpenAI, Anthropic, Llama, Gemini) and Generative AI patterns including RAG, Agentic AI, LangChain, and LangGraph. Strong in DSA (500+ LeetCode), System Design, and distributed systems; skilled with Docker, Kubernetes, and CI/CD.

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL

Generative AI & LLMs: RAG, Agentic AI, Context & Prompt Engineering, LangChain, LangGraph, LLM APIs (OpenAI, Anthropic, Llama, Gemini), Embeddings, Vector Databases (pgvector, FAISS)

Backend: Spring Boot, Microservices, Hibernate, Node.js, Express.js, FastAPI, REST APIs, GraphQL

Frontend: React.js, Next.js, Redux, HTML5, CSS3, Responsive Web Design

Databases & Search: PostgreSQL, MongoDB, OpenSearch / Elasticsearch, NoSQL, SQL / Relational Databases

Cloud & DevOps: AWS (EC2, Lambda, RDS, S3), GCP, Docker, Kubernetes, Kafka, CI/CD (GitLab CI), Git, GitHub, Bitbucket

Testing & Practices: JUnit, Selenium, Jira, Agile / Scrum, Code Reviews

Core Concepts: Data Structures & Algorithms, System Design, Distributed Systems, Performance & Cost Optimization

PROFESSIONAL EXPERIENCE

Software Engineer — GoKhana (Food-Tech), Bengaluru **Sep 2023 – Present**

- Promoted from Frontend Developer Intern to Software Engineer within 7 months; deliver features end to end on GoKhana's corporate cafeteria and food-court management platform.
- Designed and developed scalable microservices in Java (Spring Boot) and Node.js powering dashboards, reporting, and cafeteria operations.
- Optimized database queries and integrated third-party APIs, cutting average API response times by 30% and improving reliability.
- Automated minimum-guarantee (MG) and operational checklist workflows, reducing manual workload for operations teams by 40%.
- Built full-stack features with React.js, Next.js, and Redux; led code reviews and CI/CD deployments with cross-functional stakeholders.

Frontend Developer Intern — GoKhana, Bengaluru **Feb 2023 – Sep 2023**

- Built responsive UI components with React.js, HTML5, and CSS3, improving UI performance and consistency across devices.
- Shipped sales analytics, order tracking, and loyalty-program features for food-court systems.
- Refactored legacy code, reducing front-end bugs by 20% and improving SEO and accessibility scores.

PROJECTS

E-commerce Product Recommendation RAG | *Python, LangChain, LangGraph, LLM APIs (OpenAI / Anthropic), PostgreSQL (pgvector), OpenSearch, AWS S3, FastAPI, React.js, Docker*

- Built a Retrieval-Augmented Generation (RAG) system delivering personalized product recommendations by grounding LLM responses in a live product catalog, reducing hallucinations.
- Engineered an ingestion pipeline that chunks and embeds product data, storing vector embeddings in PostgreSQL (pgvector) and metadata in OpenSearch, with assets in AWS S3.
- Implemented hybrid semantic + keyword retrieval and context engineering to feed the most relevant products into the LLM prompt for catalog-aware responses.
- Added an Agentic AI layer with LangGraph to handle multi-step queries — compare, filter, and budget-aware suggestions — via tool calling and orchestration.
- Exposed REST APIs via FastAPI with a React.js chat interface; containerized with Docker for scalable, cost-aware deployment.

UClone – Full-Stack Email Application (Gmail-style) | *React.js, Node.js, Express.js, MongoDB*

- Designed and built a Gmail-inspired email client supporting email composition, send/receive, and inbox management over REST APIs.

System Design Portfolio | *AWS, Caching, Load Balancing*

- Architected scalable systems for a URL shortener, food-delivery app, and e-commerce backend — covering database design, caching, API versioning, and load balancing on AWS.

EDUCATION

B.Tech, Computer Science & Engineering — GLA University, Mathura (80%) **May 2023**

M. G. Public School, Muzaffarnagar — HSC: 91% (2019) • SSC: 9.4 CGPA (2017)

ACHIEVEMENTS

- Solved **500+ Data Structures & Algorithms problems** on LeetCode, demonstrating strong problem-solving and algorithmic depth.
- Built and deployed 5+ personal projects spanning full-stack architecture, Generative AI, and DevOps.
